Classes Taught

- LIS 639 History of Information Technology (UNCG)
 - This course covers the history of technologies used to record and disseminate information, from illuminated manuscripts to personal computing devices. While integrating perspectives from book history and computer history, the course focuses on the implications for librarians, archivists, and other information professionals. The course encourages LIS students to consider the importance of information technology history for managing and providing access to collections.
- LIS 640 Information Organization and Access (UNCG)
 - This graduate course is a core class that provides a survey of information organization standards, technologies, and approaches across cultural heritage settings. Students also consider the social and political implications of large-scale, standardized approaches to information organization.
- LIS 658 Archives Management (UNCG)
 - This graduate course introduces students to the history, theory, and practice of the archival profession. The course covers the main archival functions, including appraisal, arrangement, description, preservation, reference, and access.
- LIS 681 Rare Books, Manuscripts, and Special Collections (UNCG)
 - This graduate seminar explores the history and current state of special collections librarianship. Students engage in original research on some issue related to special collections.
- LIS 683, Archival Preservation, Curation and Access (UNCG)
 - This graduate seminar introduces students to the theory and practice of archival preservation across the full range of information media.
- INLS 385 Information Use for Organizational Effectiveness (UNC)
 - This undergraduate course covers information use in organizations from historical, sociological, information theoretical, and management science perspectives.
- INLS 465 Understanding IT for Managing Digital Technologies (UNC)
 - This mixed-level course provides an introduction to how a variety of information technologies function, and the impact of these technologies on managing digital collections in cultural heritage contexts. Students gain a deeper technical understanding of computing systems, as well as the social, political, and economic dimensions that have influenced the development of these technologies over time.
- INLS 550 History of the Book (UNC)
 - This graduate-level course offers a broad survey of the history of recorded information, including manuscripts and books, popular formats like comics and newspapers, and digital formats like e-books, websites, and social media. Students consider how cultural heritage professionals both attend to and influence the history of these information objects. Complementing this information and library science lens, the course draws upon readings from a variety of disciplines including history and art history, sociology, comparative literature, media studies, and communication.
- INLS 690 Community Archives (Teaching assistant for Denise Anthony at UNC)
 - This special topics course introduces masters students to concepts and approaches for archiving the heritage of various community groups. Applying a service-learning model, instructors and students engage in an in-depth community archiving project

over the course of the semester.

- CRWR 211A Intro Poetry Workshop (Montana)
 - This is an undergraduate course that meets an expressive arts requirement. The course introduces students to a range of poetic forms and asks students to experiment with a variety of approaches to composing poetry.
